

As part of our quality approach, here is a general picture of the maintenance recommendations of your ALMA harvesting machine. Each piece quoted offers a direct link to the [ALMA Certified Original Product Store](#).

We are available for any demand you may have or to advise you : [Fill all our contact form](#).

Periodicity	Before each campaign	Every 2 campaigns	Every 500 hours	After each campaign	Regularly according to Machine (technical review)
<b>Recommendations</b>	<b>Change :</b> 1. The <a href="#">pressure filter tractor</a> , 2. The <a href="#">oil tank filter</a> , 3. The <a href="#">chains Guides</a> .	Due to the increasingly warm weather conditions, change: 1. <a href="#">All the shakers</a> . 2. The entire <a href="#">control arm</a> .	<b>Purge :</b> Change <a href="#">Hydraulic Oil</a>	Take care to restore your harvesting machine before wintering	<b>Maintenance :</b> Consult the technical review, but do not forget: 1. To tighten the wheels, 2. To retight the chains, 3. Grease the conveyor chains, 4. To check the status of <a href="#">scales</a> , <a href="#">the bearings of the bucket chain sprockets</a>
<b>Remarks</b>		 Never insert a new shaker or control arm in the middle of the used ones as it will become crazy, soft or will break! Change them all, keep some aside to insert them in the middle of other used ones if necessary.	 Do not use multipurpose oil.		 For machines equipped with central lubrication, it is imperative to use grade 2 grease
